

# MSW

Customer: TSK Water Co., Korea  
 Facility: M&J PreShred 1000 - 7  
 Capacity: 10 tons/h

*Made the safe choice*

*"Quality is a decisive parameter for TSK Water. The company needs assurance that their equipment works and does the job as promised."*

### Only the best is good enough

TSK Water is the leading company in Korea when it comes to waste water treatment, waste treatment and new renewable energy. The company's success also lies in its persistent focus on optimising production, using the best machinery and latest technology in the market. So it seemed logical to contact Metso's distributor in Korea - ACI - when the company was in need of a powerful new shredder for one of their waste facilities. The requirement was straightforward. They needed a strong, reliable machine that could chomp up 8 tons per hour of municipal waste for 16 hours a day. Every day of the year.

They settled on an M&J PreShred 1000 S. A stationary, reliable shredder, whose numerous options made it easy to adapt it to the customer's individual requirements. The machine's intelligent shredding routines automatically adapt to the properties of the waste, leaving a homogeneous substance that makes further treatment straightforward.

### The company

TSK Water Co. is an environmental services company located in Seongnam-si, Gyeonggi-do in Korea. It was established in 2004 and is currently operating in 73 main sites in Korea.

### Easy to adapt to the customer's needs

ACI had previously sold the sorting systems to TSK Water, and the company had been extremely satisfied with it. According to the distributor, TSK Water is a company that prioritises quality. So the pool of candidates was limited, and Metso had a head start, since TSK Water had already had a positive experience with the first machine they had purchased.
